**PROfessional therapy for scars**

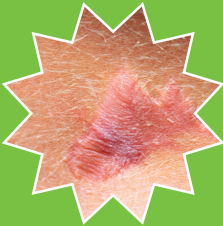

## **What are Keloid and Hypertrophic SCARS?**

**NOW  
FOR KIDS**

Keloid and hypertrophic scars are usually thick, raised, unattractive scars. They are frequently associated with a variety of characteristics including hardened, rope-like protrusions, raised surfaces and excessive discoloration.

No product will ever completely eliminate a scar, however Biodermis™ products are clinically proven to be both safe and effective as a method to manage these unsightly scars and help them blend in with the surrounding healthy tissue.

**BEFORE...**

**AFTER!!**

## **ATTENTION PHYSICIANS & PATIENTS**

Kids Pro-Sil™ is not available in most pharmacies. Patients may order from their physician or direct from Biodermis.
